

WETLAND SURVEY DATA SHEET

(1) Determine your survey boundary. (2) Locate the wetland outlet, collect water samples, and analyze using the chemical tests you have available. You may use your collection container to observe water-color and clarity and to determine water odors. (3) Estimate the water level. (4) In order to collect macroinvertebrates from a wetland you must use a multi-habitat approach to be representative; multiple samples should be collected throughout the area. Make sure to use the correct types of nets. (5) Evaluate the physical and habitat conditions; record information about known land use activities. (6) Sketch your wetland study area and submit photographs. (7) Include any other comments, data, or other information that you feel is important for evaluating the conditions of your study area.

Water body name _____ Survey date _____
 Watershed _____ County _____
 Latitude _____ Longitude _____ Directions to site _____
 Start time _____
 Survey completed by _____ Site code _____
 Affiliation _____ Email _____
 Mailing _____ Phone number _____
 address _____

WATER CHEMISTRY: Use the boxes below to record the results of your water chemistry analysis; attach additional sheets if necessary.

	Result	units		Result	units		Result	units
Temperature (C/F)			Conductivity			Alkalinity		
Dissolved oxygen			Nitrates			Iron		
pH			Phosphate			Fecal/E-coli		

Additional tests (describe and record results) _____

PHYSICAL CONDITIONS: Use the check boxes below to describe the conditions that closely resemble those of your stream. The extra lines are provided to write in any additional comments. You may see more than one type of condition; if so, be sure to indicate these on your survey (check all that apply). If multiple conditions are observed, always indicate the most dominant condition. Note: If the condition you observe is not listed, describe it in the comment section.

Water clarity		Water color		Water odor		Surface foam	
Clear		None		None		None	
Murky		Brown		Fishy		Slight	
Milky		Black		Musky		Moderate	
Muddy		Orange/red		Rotten egg		High	
Other (describe)		Gray/White		Sewage			
		Green		Chemical			

Algae color		Algae abundance		Algae growth habit		Sediment color and odor	
Light green		None		Even coating		Brown	
Dark green		Scattered		Hairy		Black	
Brown		Moderate		Matted		Green	
Other (describe)		Heavy		Floating		White/gray	
						Orange/red	

Physical condition comments: _____

DESCRIBE THE SEDIMENT ODOR(S)

Estimate the % of the wetland that is shaded

> 80	80 - 60	60 - 40	< 40
Excellent	Good	Fair	Poor

Circle your estimate

HABITAT CONDITIONS: Rate the habitat conditions by choosing the best description for the survey area. Indicate your choice by writing **O**, **S**, **M** or **P** in the spaces provided.

Points	8	6	4	2
Water source	4 sources	3 sources	2 sources	1 source
	Optimal	Suboptimal	Marginal	Poor
Water level fluctuations	Fluctuation due to natural seasonal patterns	Natural hydrology partly modified by artificial controls	Water level controlled by damming of the outlet	Fluctuations extreme due to upstream dam release, stormwater etc.
	Optimal	Suboptimal	Marginal	Poor
Vegetation diversity and coverage	4 or more vegetation classes covering > 80% of the wetland	3 vegetation classes covering 50-80% of the wetland	2 vegetation classes covering 30-50% of the wetland	1 vegetation class covering < 30% of the wetland
	Optimal	Suboptimal	Marginal	Poor
Food sources for aquatic life	Abundant macrophytes, periphyton, CPOM and FPOM	Common occurrences of macrophytes, periphyton, CPOM and FPOM	Limited amounts of macrophytes, periphyton, CPOM and FPOM	No macrophytes or periphyton, limited CPOM and FPOM
	Optimal	Suboptimal	Marginal	Poor
Sedimentation rate	No evidence of sedimentation	Evidence of sedimentation near inlets, drains and roads	Sand accumulation forming banks and bars	Sand accumulation smothering wetland vegetation
	Optimal	Suboptimal	Marginal	Poor
Substrate and soils	Sediments primarily silt/mud and organic soils	Sediments have equal quantities of gravel, sand, silt/mud and organic soils	Sediments primarily gravel and sand, with some silt/mud and organic soils	Sediments primarily gravel, cobble and sand with no silt/mud or organic soils
	Optimal	Suboptimal	Marginal	Poor
Total	> 38 (Optimal)	38 – 28 (Suboptimal)	28 – 18 (Marginal)	< 18 (Poor)

Habitat condition comments: _____

Weather conditions (current and past 48 hours): _____

LAND USE: Indicate the land uses that you believe may be having an impact on your stream station. Use the letters (**S**) streamside, (**M**) within ¼ mile and (**W**) somewhere in the watershed, to indicate the approximate location of the disturbance and the numbers (**1**) slight, (**2**) moderate or (**3**) high, to represent the level of disturbance.

Active construction			Pastureland			Single-family residences		
Mountaintop mining			Cropland			Sub-urban developments		
Deep mining			Intensive feedlots			Parking lots, strip-malls etc.		
Abandoned mining			Unpaved Roads			Paved Roads		
Logging			Trash dumps			Bridges		
Oil and gas wells			Landfills			Other (describe)		
Recreation (parks, trails etc.)			Industrial areas					

Land use comments _____

Pipes? ☐ Yes ☐ No

Describe the types of pipes observed and indicate if there is any discharge from the pipes. Also describe the color and odor of the discharge. _____

PHOTOGRAPH and **SKETCH YOUR STUDY AREA**: Use the space below or a separate piece of paper to draw your wetland survey area. Indicate the direction of flow, north, sample locations and important features of the reach. Photographs are an excellent method for tracking changes, especially changes related to the condition of the habitat. Choose a minimum of two permanent locations from which to take your photos. Submit your photos with your survey data sheet.

Photo descriptions: _____

Average size _____ Square feet

Water Level

Low

Normal

High

Dry

Current weather conditions: _____
Past 48-hours: _____

BENTHIC MACROINVERTEBRATES

Use the table below to record information about your macroinvertebrate collections. Record their **abundance** using this code: **(A) > 50**, **(C) 5 – 50** and **(R) < 5**. Also record the number of different kinds. The **# of kind's** box indicates groups in which multiple kinds (**FAMILIES**) are possible. Illustrations courtesy of the **Cacapon Institute**; Jennifer Gillies, artist

	# of kinds <input type="text"/>				
	# of kinds <input type="text"/>		# of kinds <input type="text"/>		
	# of kinds <input type="text"/>				

Other aquatic life observed or collected: _____

The coordinator will evaluate the biological integrity of the wetland system.

Submit a clear copy or the original data sheet to the coordinator. If you submit the original, always keep a copy for your records. Note: A Scientific Collection Permit from the WVDNR is required for all aquatic collections.
